

Class Exposure Information for Students

The University provides the following information for students who recently learned of possible classroom exposure(s) to COVID-19 as a preventative measure only, to promote your health and safety:

The health and safety of our community is of utmost concern, and we appreciate that we were notified and able to respond with immediacy. Once the university learns of possible COVID-19 exposure on campus, a member of the CSUF Infectious Disease Response Team will identify and notify directly any individual who may have had close contact (defined by the Orange County Health Care Agency) with a person who is suspected to have or has tested positive for COVID-19. Additionally, impacted spaces and equipment are identified and assessed for specialized cleaning. In the event that spaces in our community need to be modified or cleaned, signage is posted.

We recommend that you monitor daily for symptoms of COVID-19, which often resemble that of the cold or flu and can include:

- Fever or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

If you wish to be tested, the Centers for Disease Control and Prevention recommends testing 5-7 days after the exposure. Testing is available at no cost at Student Wellness. Visit [Titans Return: COVID-19](#) for information on scheduling a testing appointment.

We understand that receiving this notice and information may be troubling and may also cause additional concerns. If you have concerns about this exposure to COVID-19, please contact your health care provider or CSUF Health Services by calling (657) 278-2800, Monday – Friday from 9:00am – 5:00pm.

As a general safety reminder, it is important that all Titans follow safety measures as outlined in [President's Directive No. 22](#), including: wear face coverings while indoors, clean frequently touched surfaces, wash and/or sanitize hands often, and stay home if you feel unwell.

Please be mindful that federal law prohibits the university from releasing information regarding an individual's personal health information or identifying the source of the exposure.
