

University Honors and Scholars Speaker Series Presents

# An Evolving Creation:

# No Oxymoron

Exploring the scientific  
and theological case for  
biological evolution

## Keith Miller

is a professor in the Department of Geology at Kansas State University. He received his Ph.D. in Geology from the University of Rochester. His theological interests have led him to explore the relationship between God and science, specifically to study the implications of the developing scientific picture of the universe and its long creative history in the context of God as creator. Dr. Miller believes that such a perspective is important for conducting scientific inquiry, and the responsibility of humanity as God's image bearers and stewards of creation. He is the author of numerous articles as well as editor of the newly released book, *Perspectives on an Evolving Creation*.

Thursday  
March 11, 2004  
7:00 p.m.
